ASOS	Numeric	Away teams SOS

(Note: RPI and SOS may be a little different than the "official" ratings, but they will actually be more realistic for a couple reasons. The NCAA has no rules in how they account for off site games. Sometimes they call them home games if a team is close to home, sometimes they won't. Since they don't tell, you have to guess. For example, Mich St playing N Carolina in Detroit. It isn't really a home game but the NCAA counts it as a home game. It isn't really a neutral game either. I count it in between those two. In the data above, it would be a RoadAdv game for Mich St. Also, they don't count Div 1 transitional teams. I count them as soon as they play a Div 1 schedule since it can be quantified. That changes the SOS slightly which changes the RPI as well. It makes for a better RPI. Playing Seattle U, a transitional team in 2009/10, is better than playing Tex Pan American. They should be counted if they are playing a Div 1 schedule. The calculations for RPI and SOS are exactly the same method they use, the numbers are just slightly better.
